REASONS FOR ALLOWANCE

1. Claims 1, 6-15 and 18-20 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record does not anticipate nor render obvious to one ordinary skilled in the art a liquid crystal display device comprising a combination of various elements as claimed, more specifically, a first parasitic capacitance generate by the pixel electrode overlapping a first area of a data line for the corresponding pixel area and a second parasitic capacitance generated by the pixel electrode overlapping a second area of a data line for an adjacent pixel area are substantially equal to each other, a protrusion from one of the data lines having an area overlapped with the pixel electrode that is a portion of one the first and second areas, the first area has a first shape and the second area has a second shape different from the first shape.

Kim ('090) discloses a liquid crystal display device comprising a data line overlapping in two areas of the pixel electrode, wherein the areas are different in shape from each other. However, Kim fails to disclose 'a first parasitic capacitance generate by the pixel electrode overlapping a first area of a data line for the corresponding pixel area and a second parasitic capacitance generated by the pixel electrode overlapping a second area of a data line for an adjacent pixel area are substantially equal to each other, a protrusion from one of the data lines having an area overlapped with the pixel electrode that is a portion of one the first and second areas, the first area has a first shape and the second area has a second shape different from the first shape'.
